

ABSTRACT

In one aspect, the invention is directed to an absorbent product. The absorbent product includes a package and at least  $n$  absorbent articles contained in the package ( $n$  is greater than 10). Each of the absorbent articles has a body contacting surface and a garment contacting surface opposing the body contacting surface. Each of the absorbent articles includes a component material disposed between the body contacting surface and the garment contacting surface. The component material has a printed graphic which is seen through either the body contacting surface or the garment contacting surface. The  $n$  graphics of the  $n$  absorbent articles are different from each other, and preferably have a predetermined association. In another aspect, the invention is directed to a method of printing a graphic on a sheet material which will become a component material for the absorbent articles. In an yet another aspect, the invention is directed to a method of producing the absorbent product including the package and the  $n$  absorbent articles contained in the package.
